Infomaniak Housing

Install your servers in a «TIER III» datacenter in Switzerland and join some of the jewels of Silicon Valley who are already hosted in our datacenters.

Infomaniak Housing

Choosing a housing offer is an important decision for an organisation's risk management, because it can have significant consequences for the activities involved with ensuring your servers run well. That is the main reason why the vast majority of organisations decide to outsource this risk and install their technical infrastructures in professional datacenters.

Certification

After more than 20 years' experience, we are the No.1 hosting service provider in Switzerland. Without reliable and secure datacenters, we would not have reached this level of excellence. Today, Infomaniak has three datacenters in Switzerland and the company is ISO 14001 and ISO 50001 certified. We have already begun the process of obtaining ISO 27001 certification and in 2015, the canton of Geneva awarded us the Sustainable Development Prize for the implementation of the most environmentally friendly datacenter in Switzerland.
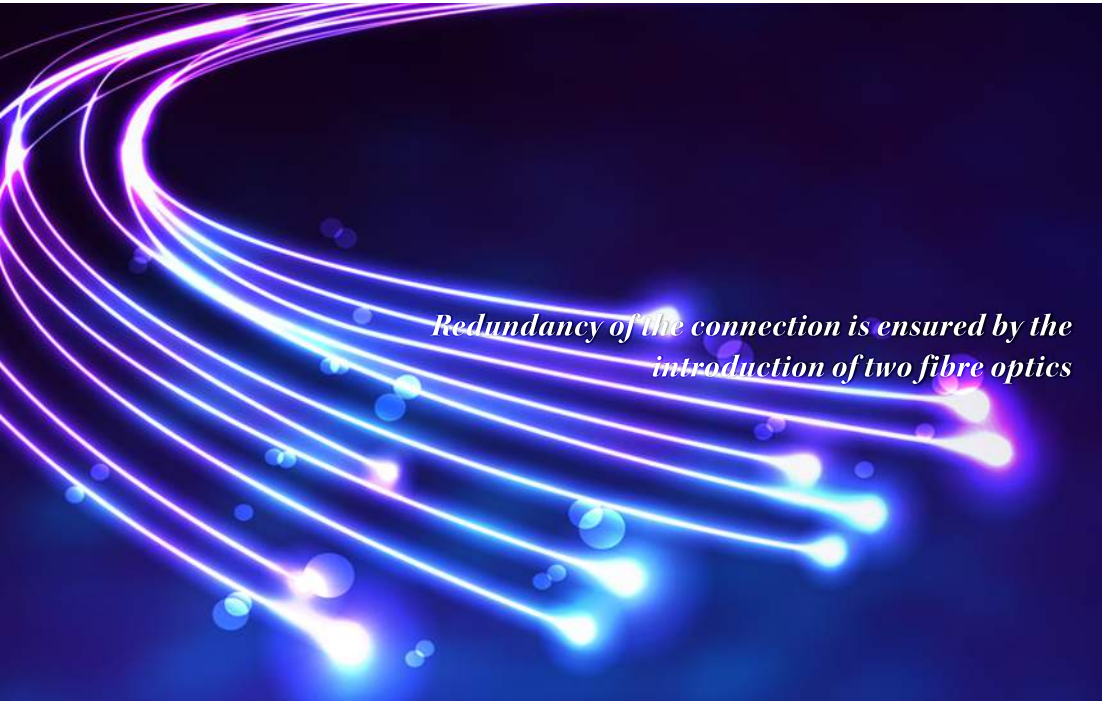

Redundancy and
unswerving Technical Security

Your reputation and ours depend on our datacenters functioning well. We therefore make no compromise on the technical security of our infrastructures.

Your reputation and ours depend on our datacenters functioning well

Redundancy of the connection is ensured by the introduction of two fibre optics

High level of availability
and security of the internet connection

All of our datacenters benefit from a redundancy n+1 at all levels (electrical supply, cooling, generator group and inverters). This guarantees an uninterrupted operation of your technical infrastructures.

Secure access 24 hrs a day, 365 days a year

The location of our datacenters is not disclosed and you are free to access your infrastructures whenever you wish.

———

Access to the datacenters and to the servers is protected by several airlocks and by an electronic access control system with biometric identification that analyses the vein network of your finger.

———

In order to further reinforce the security of the datacenters, each sector and each path to the racks is equipped with a face recognition system.

You are free to access your infrastructures whenever you wish

Switzerland is a synonym for reliability and neutrality

Located in Geneva, Switzerland, in the heart of Europe

Switzerland is a synonym for reliability and neutrality as well as being internationally recognised for its discretion and the quality of its services.

———

The IT sector enjoys the best infrastructures there: a constant and reliable power source, a high debit internet access service and an extensive fibre-optic network.

———

These characteristics allow us to manage entirely redundant and highly secure TIER III datacenters.

NSA non-compatible

Infomaniak Network SA is a neutral, independent company and we specialise entirely in the design and management of our datacenters.

———

Swiss law concerning data protection ensures complete confidentiality both for businesses and for individuals, and no government can have access to personal information without the agreement of a judge.

Swiss law concerning data protection ensures complete confidentiality

We put the best in terms of security and reliability at your disposal
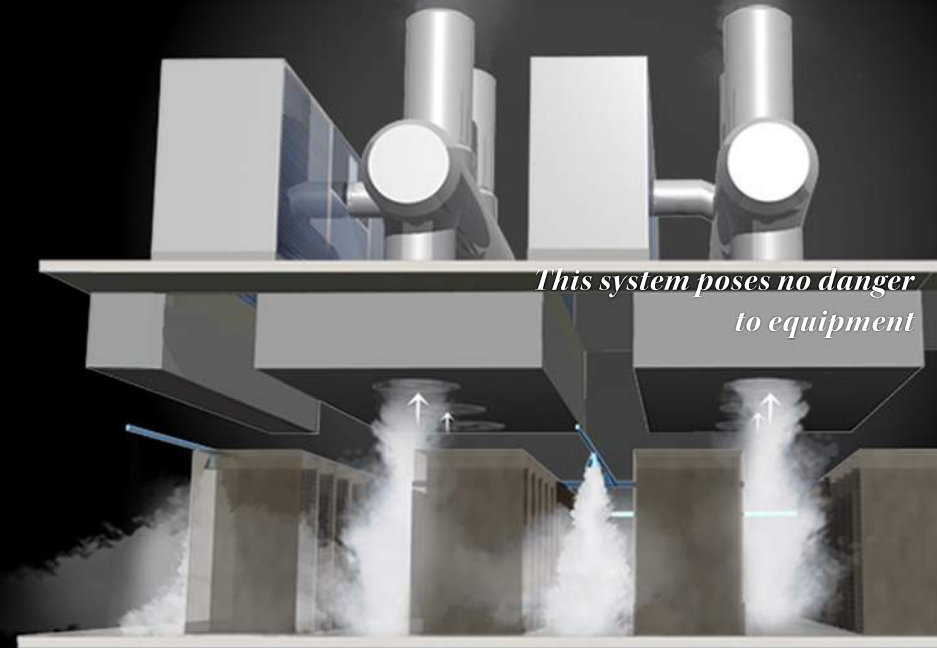

Environmentally friendly and long-lasting

We put the best in terms of security and reliability at your disposal, while at the same time integrating the latest technologies in order to preserve the environment and reduce your electrical power needs.

———

Infomaniak is ISO 14001 and ISO 50001 certified. We have also been awarded the canton of Geneva's sustainable development prize for implementing the most environmentally friendly datacenter in Switzerland. This centre does not need air conditioning and is powered solely by renewable energy.

An uninterrupted service, even in the event of fire

In the event of fire, our latest anti-fire system automatically injects water at 200 bars through micro perforated nozzles, allowing the flames to be smothered while leaving the servers working.

This system poses no danger to people, equipment or the environment

This system poses no danger to equipment

Establish a secure link between your organisation and our datacenters at very attractive prices.
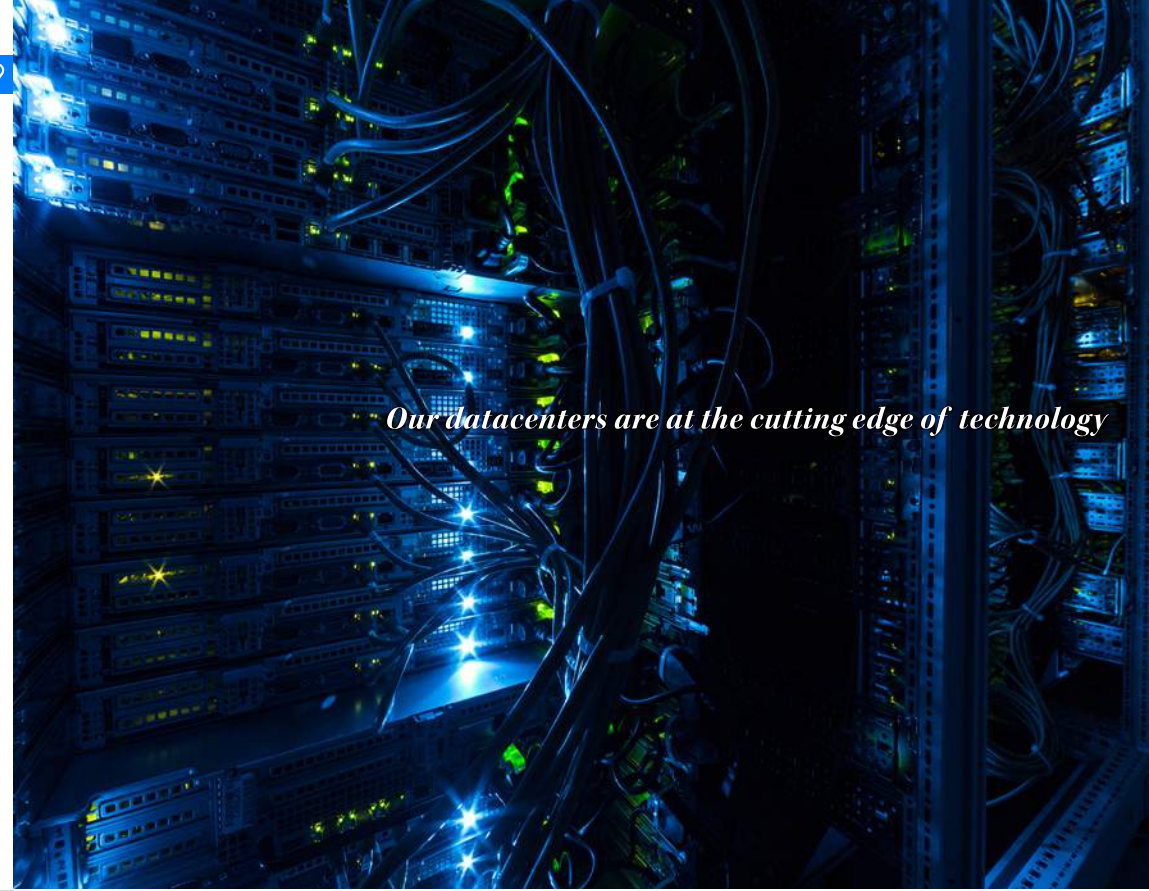

Personalised interconnections

Establish a secure link between your organisation and our datacenters at very attractive prices. We only charge you for the time needed for technical intervention at the implementation stage, and not for any extra maintenance costs.

TIER III design

Our datacenters are at the cutting edge of technology and integrate the expertise and experience we have accumulated over 20 years in the field of web hosting.

Our infrastructures are designed to respond to the evolving needs of a demanding customer base.

Our datacenters are at the cutting edge of technology

Use our equipment to troubleshoot your problems

We put a technical room complete with tools, trolleys, screens, keyboards, electric and network cable are at your disposal. We have anticipated things you may not have expected and our goal is to offer you the best in terms of housing.

We put a technical room complete with tools at your disposal

Our offers are transparent and allow you to guard against hidden costs.

Flexible and Transparent

Our offers are transparent and allow you to guard against hidden costs. If you should need them, our advisors are there to answer your technical questions, and if we are able to adapt our offers to respond to your needs, we will do so.
